

Role Product Owner: Product Backlog

1. User Account Management:

-User Story 1: As a student, I want to create a new account with a unique username and password so that I can access the application features through a secure login process.

2. Course Management:

-User Story 2: As a student, I want to view a list of all available courses so that I can choose which to join.

-User Story 3: As a student, I want to join as many courses as I want so that I can parallel study several topics.

-User Story 4: As a student, I want to drop a course so that I won't be shown courses I am no longer interested in.

3. Course Details:

-User Story 5: As a student, I want to view detailed information about a specific course, including the description, lecturer, schedule, location, and the number of registered students so that I can be well informed and convinced in my choice of study.

4. Feedback Management:

-User Story 6: As a student, I want to leave feedback for a course I've attended, including a description and a rating (1 to 5) so that I can share my opinion and experience in that course.

-User Story 7: As a student, I want to view a list of feedback for any course, ordered by date, and see the average rating so that I can benefit from the previous experience of other students.

5. Top-Rated Courses:

-User Story 8: As a student, I want to view the top 8 rated courses if they are more than 8 so that I can have a priority list of courses I might chose.

6. Course Calendar:

-User Story 9: As a student, I want to view all of my courses in a calendar so that I can organize my schedule and don't miss any class.

7. Feedback Maintenance:

-User Story 10: As a user, I want any feedback that is more than 1 year old not to be shown as I don't want to decide based on outdated information.

8. Usability and Platform Requirements/Non-functional Requirements

Description:

- As a user, I want the application to be intuitive, with all interactions completed in less than three clicks.
- As a developer, I want to develop the application in Java language.
- As a developer, I want to use Git as the version control system and GitHub as the hosting platform.
